

Feast Ventures Financial Product I GmbH & Co. KG Sustainability-Related Disclosures

- I. **Pre-contractual sustainability-related disclosures according to the Sustainable Finance Disclosure Regulation (EU) 2019/2088 (“SFDR”) and the Taxonomy Regulation (EU) 2020/852 (“TAXR”)**
1. **Consideration of sustainability risks in investment decision-making processes (Art. 6 (1) SFDR)**

Feast Ventures Management GmbH, being the Alternative Investment Fund Manager (“**AIFM**”) of the alternative investment Fund **Feast Ventures Fund I GmbH & Co. KG** (“**Financial Product**”), takes sustainability risks into account when investing in companies primarily in the pre-seed or seed phase with a focus on B2B business models within Europe, North America, Israel and China that are engaged in the development, marketing and scaling of innovative food and agritech solutions (“**Portfolio Companies**”).

In accordance with the SFDR, “sustainability risk” means an environmental, social or governance (“**ESG**”) event or condition that, if it occurs, could cause an actual or a potential material negative impact on the value of an investment. To the extent that sustainability risks materialize, it may result in a significant reduction of the Financial Product's net asset value and thus have a strong adverse impact on returns.

Impacts of sustainability risks on the returns of the Financial Product typically vary depending on the location, sector and industry of its investments. In general, sustainability risks such as a progressing climate change may lead to negative impacts on the assets of the Financial Product or its Portfolio Companies. With respect to climate change, there are in particular actual physical risks (e.g. extreme weather events) and transition risks (e.g. costs for the transformation of the energy system). In the field of good governance and with regards to social characteristics, there are, for example, risks concerning the reputation of Portfolio Companies or potential claimed damages. Responding political and regulatory measures may also lead to considerable costs and the reduction of asset values.

The AIFM has implemented an ESG policy and follows it in the investment process. When evaluating a potential investment, the AIFM analyzes potential material risks and opportunities related to ESG matters. Reasonable steps are taken to mitigate ESG-related risks. However, the Financial Product does not have sustainable investments as its objective nor does it promote environmental or social characteristics. The AIFM regularly reviews its ESG policy to ensure alignment with current regulatory standards and market best practices as they may evolve over time.

2. No Consideration of principal adverse impacts on sustainability factors (Art. 4, 7 SFDR)

The AIFM does not consider principal adverse impacts on sustainability factors.

“Principal adverse impacts” according to the SFDR are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters (sustainability factors).

The AIFM will not be able to provide with a reasonable commercial effort all the information set out by the SFDR to meet its standards regarding disclosure and reporting of principle adverse impacts. Due to the blind pool-character of the Financial Product, the AIFM cannot determine *ex ante* whether all of its Portfolio Companies will be able to provide the prescribed data. Additionally, as the Financial Product will be holding minority shareholder-positions in its Portfolio Companies, it will not be able to ensure the adherence to the standards set out by the SFDR.

3. Statement regarding the EU criteria for environmentally sustainable economic activities (Art. 7 TAXR)

The Financial Product does not have a sustainable investment objective nor will it promote environmental or social characteristics in accordance with articles 9 and 8 SFDR and articles 5 and 6 TAXR. The investments will not take into account the EU criteria for environmentally sustainable economic activities.
